

Website: COMREX

1. Landing Page: Tired of underutilizing your resources?
Why COMXREX?
About us
Join Us
2. A site used for commodity exchange, trading and investment
3. It should have investment and trading section separately (that can be switched from each other)
4. When in investment mode, it should contain live charts/current percentage for each commodity in a list/table having 3 columns: Name of commodity, Last change and current change. The live chart should only be accessible when clicked. Only the current percentage will be shown. Below is the list of commodities:
 - a. Charcoal
 - b. Starch
 - c. Chaff
 - d. Rice
 - e. Apples
 - f.

if a commodity is clicked it should open the chart with different time frames using its change in percentage as metric for the chart.

Underneath a section should appear holding of a form that needs: Investment period, Base currency, Unit price should be stated. A button/dropdown or something for comparison with other commodity.

5. For trade mode, each and every commodity will have a unit price. You can select the commodity you have (Sell) and the one you need (buy). Unit conversion rate should then be specified e.g 1 bag of rice = 40 bags of apples. A form section should be made available for amount to be bought and seller to buy from. The transaction rate should change with respect to seller's commodity grade.
6. A feature provides the opportunity for sellers to each create their profiles. It would have star rating based on reviews. Inside each seller's profile, a list with columns: name of commodity and grade of traded/available commodities should be shown and the appropriate grade for each commodity should be shown.
7. Normal sign up and login.
8. Other tabs: claim bonus
9. Guests can spectate all sections. But can only place order or investment when signed up/in
10. When logged into dashboard, wallet balance should be shown.
